

European Technical Assessment ETA 20/0273 of 19/08/2022

I General Part

| | |
|---|---|
| Technical Assessment Body issuing the ETA | Eurofins Expert Services Oy |
| Trade name of the construction product | Arras CF Angle Brackets |
| Product family to which the construction product belongs | Three-dimensional nailing plates |
| Manufacturer | Arras Construction Furniture OÜ Valli tee 17 75413 Vaela küla, Kiili vald Estonia www.arrascf.eu |
| Manufacturing plant | Arras Construction Furniture OÜ Valli tee 17 75413 Vaela küla, Kiili vald Estonia |
| This European Technical Assessment contains | 94 pages including 2 Annexes which form an integral part of this assessment |
| This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of | EAD 130186-00-0603 for Three-dimensional nailing plates |
| This ETA replaces | ETA 20/0273 of 17/05/2021 |

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full excepted the confidential Annex(es) referred to above. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II Specific Part

1 Technical description of the product

The angle brackets covered by this ETA are stated in Tables A2.1 and A2.2 of Annex 2.

Arras CF Angle Brackets are one-piece non-welded three-dimensional nailing plates to be used in timber-to-timber or timber-to-concrete connections. The angle brackets are connected to the timber members by anchor nails or screws.

The Arras CF Angle Brackets are made from pre-galvanized steel DX51D+Z275 or S250GD+Z275 according to EN 10346:2015 or from cold rolled austenitic stainless steel plate of grade 1.4301, 1.4307, 1.4401 or 1.4404 according to the standard EN 10088-2 / EN10088-4 or from grade AISI 304, AISI 304L, AISI 316 or AISI 316L according to the standard ASTM A240/A240M.

In the zinc coated connectors, the yield strength R_{el} or R_{02} of the steel is at least 250 N/mm², the tensile strength R_m at least 330 N/mm² and elongation at failure A_{80} at least 19 %. Amount of the zinc coating is at least 275 g/m². In stainless steel connectors A4, the yield strength R_{02} of the steel is at least 240 N/mm², the tensile strength R_m at least 530 N/mm² and the elongation at failure A_{80} at least 40 %. In stainless steel connectors A2, the yield strength R_{02} of the steel is at least 220 N/mm², the tensile strength R_m at least 520 N/mm² and the elongation at failure A_{80} at least 45 %.

The product drawings are in Annex 1 and the sizes of Arras CF Angle Brackets are listed in tables of Annex 2. The steel material thickness of the zinc coated connectors is $2,00 \pm 0,15$ mm, $2,50 \pm 0,17$ mm or $3,00 \pm 0,20$ mm. The material thickness of stainless steel connectors is $2,00 \pm 0,10$ mm or $2,50 \pm 0,12$ mm. Tolerance for the position of the holes is within $\pm 1,00$ mm.

2 Specification of the intended uses in accordance with the applicable EAD

2.1 Intended uses

Intended use of Arras CF Angle Brackets are timber constructions, where both flanges of the bracket are fixed to strength graded timber according to EN 14081-1, glulam according to EN 14080, softwood- or laminated logs, laminated veneer lumber (LVL) according to EN 14374, plywood according to EN 13986, cross laminated timber (CLT) with edge glued lamellas, or corresponding timber material. The characteristic density ρ_k of the timber shall not be greater than 500 kg/m³. This ETA does not cover angle brackets fixed in the end of a timber member or in the edge of a LVL member.

The forces to be transferred by the angle bracket shall act at the centre of the fastener group on the plane defined by flange A. For non-symmetric connections the flange A means the bigger flange. For unclear cases the flange A is presented in figures of Appendix 1. Shear capacity represents the force component that is in effect in direction of a flange surface. Tensile and compression force are the force components that are in effect in direction perpendicular to a flange surface. The obtuse-angled Angle Bracket 135° connectors 73104, 73107 and 73111 may be loaded only by a shear force parallel to the bent edge of the connector. The long adjustable hole brackets no 74402 and 74406 are used typically for fixing non-settling construction members to a log wall and they may be loaded only by tension loads.

Arras CF Angle Brackets shall be fixed to timber by anchor nails or anchor screws (see Figure 1) according to EN 14592. The diameter of the anchor nails shall be $d = 4,0$ mm and the profiled length at least 24 mm. The anchor screw shall have a conical head, the diameter of the smooth part of the screw shall be $d = 4,5...5,0$ mm and the inner diameter of the threaded part $d_1 \geq 3,0$ mm. The length of the threaded part of the screw shall be at least $6d$.

Connections with Arras CF angle brackets shall fulfil the minimum spacing and edge distance requirement specified in EN 1995-1-1. Timber parts shall not be pre-drilled for the nails or screws. Fasteners shall be perpendicular to the grain of the timber.

Figure 1. Fasteners: a) anchor nail and b) anchor screw.

The flange B of the Angle Bracket may be connected also to other applicable rigid material such as concrete or steel (support side material). In this case, the angle bracket shall be fixed with CE-marked bolts, threaded bars, anchor bolts or concrete screws with diameter 8/10/12 mm through the 9/11/13 mm holes to the rigid material or with concrete screws with diameter of 6 mm through the 7 mm holes. The concrete screws shall have been ETA assessed in accordance with EAD 330232-00-0601 or EAD 330499-01-0601.

For Arras CF Angle Brackets made of hot-dip zinc coated steel, the intended service classes according to EN 1995-1-1 are classes 1 and 2. Angle Brackets made of stainless steel can also be used in service class 3.

In service class 2, the nails or screws shall have an electroplated zinc coating according to EN ISO 2081 at least of type and thickness Fe/Zn 12c, or they shall be hot dip zinc coated according to EN ISO 1461, thickness at least 39 µm. In service class 3, the nails or screws shall be made of stainless steel.

2.2 Working life

The provisions made in this European Technical Assessment are based on an assumed intended working life of the angle brackets of 50 years.¹

2.3 Identification

Arras CF Angle Brackets are identified by product labels that are marked with "ARRAS" logo.

¹ This means that it is expected that when this working life has elapsed, the real working life may be, in normal use conditions, considerably longer without major degradation affecting the essential requirements of the works. The indications given as to the working life of a product cannot be interpreted as a guarantee given by the producer or the assessment body. They should only be regarded as a means for the specifiers to choose the appropriate criteria for products in relation to the expected, economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

Table 1. Basic requirements for construction works and essential characteristics

| Basic requirement and essential characteristics | Performance |
|---|-------------------------|
| BWR 1. Mechanical resistance and stability | |
| Joint strength | Clause 3.1 |
| Joint stiffness | No performance assessed |
| Joint ductility | No performance assessed |
| Resistance to seismic actions | No performance assessed |
| Resistance to corrosion and deterioration | Clause 3.1 |
| BWR 2. Safety in case of fire | |
| Reaction to fire | Clause 3.2 |
| Resistance to fire | No performance assessed |

3.1 Mechanical resistance and stability, BWR 1

3.1.1 Joint strength

Characteristic resistance values of Arras CF Angle Brackets are given in Annex 2.

3.1.2 Resistance to corrosion and deterioration

Arras CF Angle Brackets have been assessed as having satisfactory durability and serviceability when used in timber structures when the timber species (including timbers preserved with organic solvent, boron diffusion and related preservatives) described in Eurocode 5 (EN 1995-1-1: 2004) are used and the structures are subject to the dry, internal conditions defined by service classes 1 and 2. Angle Brackets manufactured from stainless steel can also be used in service class 3 provided that also the nails and screws used together with them are made of stainless steel.

3.2 Safety in case of fire, BWR 2

3.2.1 Reaction to fire

Arras CF Angle Brackets are made of materials classified to have reaction to fire class A1 according to EN 13501-1.

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the Decision 97/638/EC of the European Commission², the system of assessment and verification of constancy of performance (see Annex V to the regulation (EU) No 305/2011) is System 2+.

² Official Journal of the European Communities L 268 of 1/10/1997

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD.

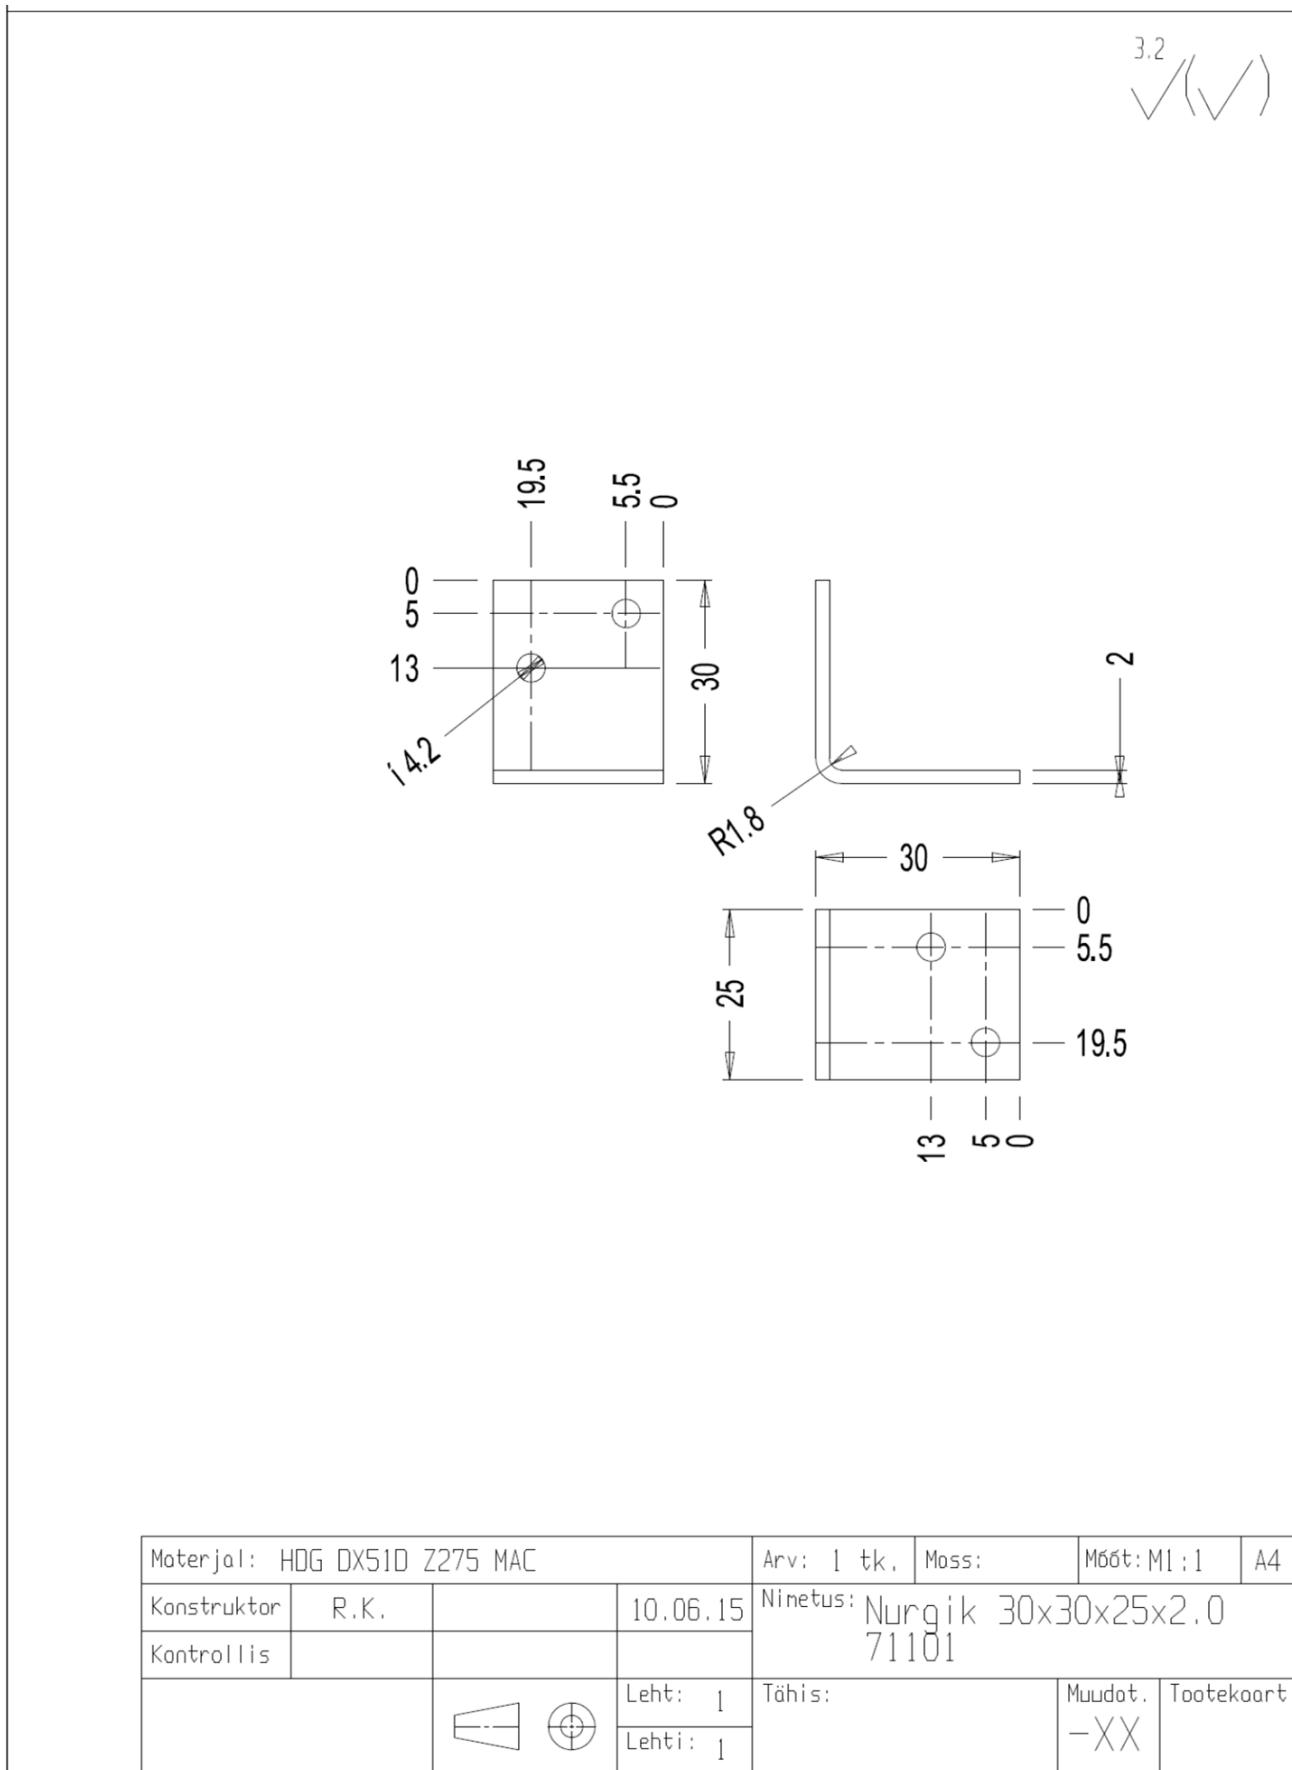

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Eurofins Expert Services Oy prior to CE marking.

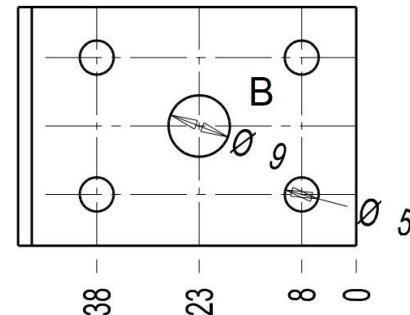

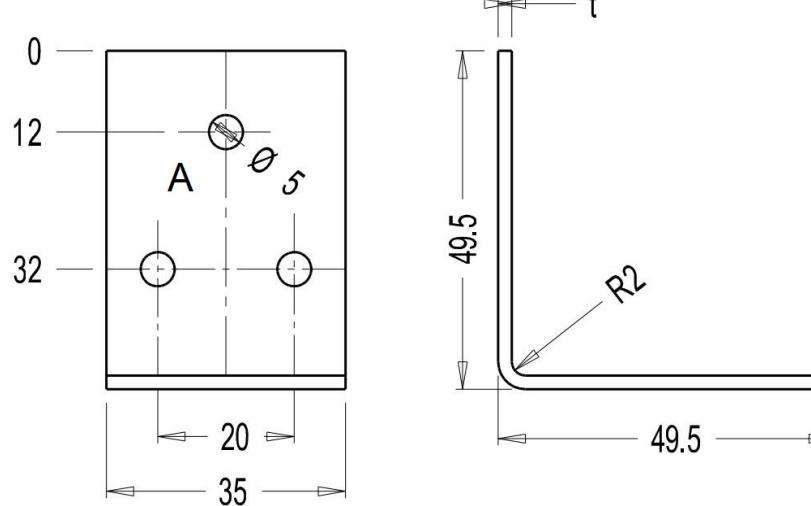

Issued in Espoo on August 19, 2022

ANNEX 1: Product details and definitions

ANNEX 1: Product details and definitions

ANNEX 2. CHARACTERISTIC LOAD-CARRYING CAPACITIES

Characteristic resistances for Arras CF Angle Brackets - calculation method

Load carrying capacity of non-sliding angle bracket connections

The design resistance R_d of the angle bracket connection is

$$R_d = k_{\text{mod}} \frac{R_k}{\gamma_M} \quad (1)$$

where k_{mod} is the modification factor according to EN 1995-1-1 taking into account the effect of the duration of the load and moisture content for timber, γ_M is the partial factor for the resistance of connections according to the relevant National annex of EN 1995-1-1 and R_k is the characteristic resistance of the angle bracket connection.

When the connection made by the angle bracket is loaded by a shear force at the plane of flange A in the middle of the flange, it shall be checked that the conditions according to equations (2) to (4) are fulfilled

$$F_d \leq R_{A,d} \quad (2)$$

$$F_{x,d} \leq R_{B,x,d} \quad (3)$$

$$F_{z,d} \leq \begin{cases} R_{B,z,t,d} & \text{when the connection is in tension} \\ R_{B,z,c,d} & \text{when the connection is in compression} \end{cases} \quad (4)$$

where $F_{x,d}$ is the component in the direction of the bent edge of the angle bracket from the connection force F_d and $F_{z,d}$ is the component perpendicular to $F_{x,d}$ from the connection force F_d . The obtuse-angled Angle Bracket 135° connectors 73104, 73107 and 73111 may be loaded only by a shear force parallel to the bent edge: $F_d = F_{x,d}$.

In addition, when the connection is loaded in tension, the following interaction equation shall be fulfilled:

$$\left(\frac{F_{z,d}}{R_{B,z,t,d}} \right)^2 + \left(\frac{F_{x,d}}{R_{B,x,d}} \right)^2 \leq 1 \quad (5)$$

Characteristic resistance

$$R_{A,k} = n_A F_{A,v,Rk} \quad (6)$$

where n_A is number of fasteners at flange A. $F_{A,v,Rk}$ is the characteristic lateral load-carrying capacity of the fastener in the timber part against flange A according to EN 1995-1-1, equation (7) for steel plate thickness t less than or equal to $d/2$ and (8) for thicker steel plates of thickness greater than or equal to d :

$$F_{v,Rk} = \min \begin{cases} 0,4 f_{h,k} t_1 d & \text{(a)} \\ 1,15 \sqrt{2M_{y,Rk} f_{h,k} d} + \frac{F_{ax,Rk}}{4} & \text{(b)} \end{cases} \quad (7)$$

$$F_{v,Rk} = \min \begin{cases} f_{h,k} t_1 d & \text{(a)} \\ f_{h,k} t_1 d \left[\sqrt{2 + \frac{4M_{y,Rk}}{f_{h,k} d t_1^2}} - 1 \right] + \frac{F_{ax,Rk}}{4} & \text{(b)} \\ 2,3\sqrt{M_{y,Rk} f_{h,k} d} + \frac{F_{ax,Rk}}{4} & \text{(c)} \end{cases} \quad (8)$$

where $t_1 = L - t$ when L is the length of the fastener, t is the thickness of steel plate, $M_{y,k}$ is according to standards EN 14592 and EN 409 experimentally determined characteristic value of the yield moment of the fastener, $F_{ax,Rk}$ is the withdrawal resistance of the fastener according to Eq. (10) limited at maximum to $1/3$ with nails and $1/2$ with screws from the load-carrying capacity $F_{v,Rk}$ and the characteristic value of the embedding strength

$$f_{h,k} = 0,082 \rho_k d^{-0,3} \quad \text{N/mm}^2 \quad (9)$$

The characteristic withdrawal resistance of the nail

$$F_{ax,Rk} = f_{ax,k} d t_{pen} \leq f_{tens,k} \quad (10a)$$

and for the screw

$$F_{ax,Rk} = n^{-0,1} f_{ax,k} d l_{ef} \left(\frac{\rho_k}{\rho_a} \right)^{0,8} \leq n^{-0,1} f_{tens,k} \quad (10b)$$

where $f_{ax,k}$ is the withdrawal parameter determined by testing according to standards EN 14592 and EN 1382 for the actual timber material with density ρ_a , $f_{tens,k}$ is the experimentally determined tensile resistance of the fastener together with a steel plate, t_{pen} is the penetration depth of the profiled part of the nail in timber, n is the number of the screws in the flange of connector, l_{ef} is the length of threaded part of the screw and ρ_k is the characteristic density of timber in the actual connection. If the penetration depth for an anchor nail is less than $t_{pen} \leq 8d = 32$ mm, the resistance according to Eq. (10a) is reduced by $(t_{pen}/8mm - 3)$.

Eq. (8) may be used for angular ring shank nails, if the length of the conical part is at least 4 mm and the diameter of the cone at the head of the nail is at least 5,2 mm. Otherwise linear interpolation of equations (7) and (8) is used for the steel plate thicknesses between 2 and 4 mm.

Characteristic resistance

$$R_{B,x,k} = k_m F_{B,v,Rk} \quad (11)$$

where $F_{B,v,Rk}$ is the characteristic lateral load-carrying capacity of the fastener in the timber part against flange B, according to EN 1995-1-1, and the factor k_m depends on the placement of the fasteners. Values of k_m are given in Table A2.1 for cases, where fasteners are used in all 5 mm holes of the angle bracket.

Characteristic tension resistance for angular brackets without reinforcement ribs

$$R_{B,z,t,k} = \min \begin{cases} F_{n,1} + F_{n,2} - 3 \cdot \frac{F_{n,1} \cdot d_1 + F_{n,2} \cdot d_2 - \frac{B \cdot t_d^2}{4} \cdot f_y}{2L_B + d_2} & \text{(a)} \\ \frac{t_d^2 f_y}{4 d_1} \cdot (B + B_{net,1}) & \text{(b)} \\ \frac{t_d^2 f_y}{4 d_2} \cdot (B + B_{net,2}) + \frac{F_{n,1}(d_2 - d_1)}{d_2} & \text{(c)} \\ F_{n,1} + F_{n,2} & \text{(d)} \end{cases} \quad (12)$$

where

- d_1 distance between the bent edge and the hole row nearest to it in flange B ($i = 1$),
- d_2 distance between the bent edge and the hole row second nearest to it in flange B ($i = 2$),
- B the width of the angular bracket,
- t_d is the thickness of the Angle Bracket to be used in calculations (= the minimum thickness minus the thickness of the zinc coating),
- f_y yield strength of the steel of the Angle Bracket,
- L_B the length of flange B from the middle of the bent edge,
- $B_{\text{net},i}$ the net width of the Angle Bracket at hole row i and

$$F_{n,i} = n_i F_{ax,Rk} \quad (13)$$

when n_i is the number of fasteners at row i and $F_{ax,Rk}$ is the characteristic withdrawal resistance of the fastener in the timber member against flange B according to EN 1995-1-1.

If there are fasteners only in one or two rows at flange B, in expression (12) equation (a) is inserted by $F_{n,2} = 0$ and $d_2 = d_1$ and equation (c) needs not to be checked.

Characteristic tension resistance for a angle bracket with reinforcement rib

$$R_{B,z,t,k} = \min \begin{cases} \sum F_{a,j} + F_{n,1} - 3 \cdot \frac{F_{n,1} \cdot d_1 - \frac{B \cdot t_d^2}{4} \cdot f_y}{2L_B - 2a + d_2} & \text{(a)} \\ \max \left\{ \frac{t_d^2 f_y}{4(a + d_1)} \cdot (B + B_{\text{net},1}) + \frac{\sum (F_{a,j} (a + d_1 - a_j))}{a + d_1} \right\} & \text{(b)} \\ \sum F_{a,j} + F_{n,1} & \text{(c)} \end{cases} \quad (14)$$

where

- d_1 distance between the end of the reinforcement fold and the hole row nearest to it in flange B ($i = 1$)
- a is the length of the stiffener ridge in flange B
- a_j is distance between bent edge and the fastener row j
- B the width of the angle bracket at the end of reinforcement rib
- t_d is the thickness of the connector to be used in calculations (= the minimum thickness minus the thickness of the zinc coating)
- f_y yield strength of the steel of the connector
- L_B the length of flange B from the middle of the bent edge
- $B_{\text{net},i}$ the net width of the angle bracket at hole row i

$$F_{n,i} = n_i F_{ax,Rk} \quad (15)$$

$$F_{a,j} = n_j F_{ax,Rk} \quad (16)$$

when n_1 is the number of fasteners in the row nearest to the end of the reinforcement fold (i), n_j is the number of fasteners at row j in the part of flange B with the reinforcement and $F_{ax,Rk}$ is the characteristic withdrawal resistance of the fastener in the timber member against flange B according to EN 1995-1-1.

If the flange B of the connector only has one row of fasteners on the part without stiffener rib, in equation (14) is inserted $F_{n,1} = 0$.

For a stiffened connector that have no fasteners on the reinforcement area, the tension capacity may be calculated as maximum of equations (12) and (14). Then in expression (12), the flange length L_B is taken as distance between the end of the reinforcement rib and the end of the flange.

Characteristic compression resistance for angle brackets without reinforcement

$$R_{B,z,c,k} = t_d \cdot \sqrt{3 \cdot B \cdot B_{\text{net}} \cdot f_y \cdot f_{c,90,k}} \quad (17)$$

where t_d , B and f_y are defined as for equation (12) and B_{net} is the smallest net width of the flange B and $f_{c,90,k}$ is the characteristic compression strength perpendicular to the timber member against flange B.

Characteristic compression resistance for angle brackets with reinforcements

$$R_{z,c,B,k} = 3 \cdot a \cdot B_{\text{ef}} \cdot f_{c,90,k} + t_d \cdot \sqrt{3 \cdot B \cdot B_{\text{net}} \cdot f_y \cdot f_{c,90,k}} \quad (18)$$

where a is the length of the reinforcement rib from the bent edge of the angular bracket, B_{ef} is the width of the angular bracket minus the width of the reinforcement and the other symbols as for equation (17).

Calculated characteristic compression resistances of Arras CF Angle Brackets are shown in Tables A2.3 and A2.4 for connections of sawn timber of strength class C24.

For a timber-to-concrete angle bracket connection, the resistance of the corresponding timber-to-timber connection may be used, provided that the lateral load carrying capacity and axial tension capacity of the fastener group of flange B in concrete are greater or equal than the capacities of the fastener group of flange B in timber member.

Load carrying capacity of long adjustable brackets no 74402 and 74406

In design of long adjustable hole brackets following condition shall be fulfilled

$$\left(\frac{F_{z,t,d}}{R_{B,z,t,d}} \right)^2 + \left(\frac{F_{y,t,d}}{R_{A,y,t,d}} \right)^2 \leq 1 \quad (19)$$

where $F_{z,t,d}$ is the design tension load perpendicular to flange B and $F_{y,t,d}$ is the design tension load perpendicular to the sliding flange A.

The design capacities are as follows

$$R_{B,z,t,d} = \min \left\{ \frac{\frac{k_{\text{mod}}}{\gamma_M} \cdot R_{t,z,k}}{\gamma_{M,1}}, \frac{\frac{k_{\text{mod}}}{\gamma_M} \cdot R_{v,z,k}}{\gamma_{M,1}}, \frac{R_{b,z,k}}{\gamma_{M,1}} \right\} \quad (20)$$

$$R_{A,y,t,d} = \min \left\{ \frac{\frac{k_{\text{mod}}}{\gamma_M} \cdot R_{t,y,k}}{\gamma_{M,1}}, \frac{\frac{k_{\text{mod}}}{\gamma_M} \cdot R_{v,y,k}}{\gamma_{M,1}}, \frac{R_{f,y,k}}{\gamma_{M,1}} \right\} \quad (21)$$

where $\gamma_{M,1}$ is the partial safety factor in accordance with the relevant national annex of standard EN 1993-1-3, k_{mod} is the modification factor for load duration and moisture content according to EN 1995-1-1 and γ_M is the partial safety factor of connection in accordance with the relevant national annex of standard EN 1995-1-1.

The characteristic lateral load capacities of the fastener connections are as follows

$$R_{v,z,k} = F_{v,A,Rk} \quad (22)$$

$$R_{v,y,k} = 2,213F_{v,B,Rk} \quad (23)$$

$$R_{b,z,k} = 824 \text{ N} \quad (24)$$

where $F_{v,A,Rk}$ is the lateral load-carrying capacity per fastener in the sliding part and $F_{v,B,Rk}$ is similarly the load-carrying capacity per fastener in nailing plate side, see equations (7) and (8).

The characteristic capacities for connector no 74402 are as follows:

$$R_{t,z,k} = \min \begin{cases} 1,2F_{ax,B,Rk} + 939 \text{ N} \\ 6F_{ax,B,Rk} \end{cases} \quad (25)$$

$$R_{t,y,k} = \min \begin{cases} 0,358F_{ax,A,Rk} + 923 \text{ N} \\ F_{ax,A,Rk} \end{cases} \quad (26)$$

$$R_{f,y,k} = 1807 \text{ N} \quad (27)$$

where $F_{ax,A,Rk}$ is the withdrawal capacity of the sliding fastener and $F_{ax,B,Rk}$ is the withdrawal capacity of nailing plate side fastener, see equations (10a) and (10b).

The characteristic capacities for connector no 74406 are respectively:

$$R_{t,z,k} = \min \begin{cases} 1,672F_{ax,B,Rk} + 1309 \text{ N} \\ 6F_{ax,B,Rk} \end{cases} \quad (28)$$

$$R_{t,y,k} = \min \begin{cases} 0,496F_{ax,A,Rk} + 1278 \text{ N} \\ F_{ax,A,Rk} \end{cases} \quad (29)$$

$$R_{f,y,k} = 3413 \text{ N} \quad (30)$$

Structural requirements

Connections with the angle brackets shall fulfil the minimum spacing and edge and end distance requirements specified in EN 1995-1-1. The minimum distances a_1 and a_2 in table 8.2 of EN 1995-1-1 can be multiplied by a factor of 0,7 (nailed steel-to-timber connections).

If angle brackets are placed on both sides of the timber, the point of the fastener shall be at most $4d$ from the surface of the opposing side, where d is the nominal diameter of the fastener.

It is not possible to fill all holes by fasteners in all configurations and loading combinations of the angle brackets. In partial fixing the fasteners shall always be placed in the row nearest to the end of the flange and as near as possible to the bent edge of the angle bracket. Additionally, the fasteners should be positioned symmetrically.

The sliding angle brackets are always fixed from all holes of 5 mm diameter.

All fasteners in same flange shall be identical. The opposing flanges may have different fasteners.

Table A2.1. Article numbers of the non-sliding Arras CF Angle Brackets, nominal dimensions, grade of steel plate, number of fasteners in flange B n_B , eccentricity of the fastener group e , sum of the moment arms for the fastener group Σr_i and values for factor k_m when the fasteners are used in all 5 mm diameter of holes.
