Certificates

ETA 22/0214 Certification according to EAD 330499-01-0601 (former ETAG 001-5) for use on non-cracked and cracked concrete (Option 1) with threaded bar; performance category C1 for seismic actions with threaded bars from M8 to M16; performance category C2 for seismic actions with threaded bars M12, M16. Use on non-cracked concrete with reinforcing bars.

ETA 22/0211 Certification according to EAD 330076-01-0604 (former ETAG 029) for anchoring on solid and hollow masonry with threaded bar and plastic sleeve

ETA 22/0213 Certification according to EAD 330087-01-0601 for rebar connections in existing structures, design according to Eurocode 2 (EN 1992-1-1)

Complies with LEED® requirements, EQ Credit “Low-emitting products”
Class A+ for emission of volatile organic compounds (VOCs) in living spaces

Base material

uso certificato		**uso specifico**
non-cracked concrete cracked concrete solid masonry hollow masonry	lightweight concrete masonry concrete hollow block autoclaved aerated concrete	natural stone solid, perforated and hollow masonry

Sizes

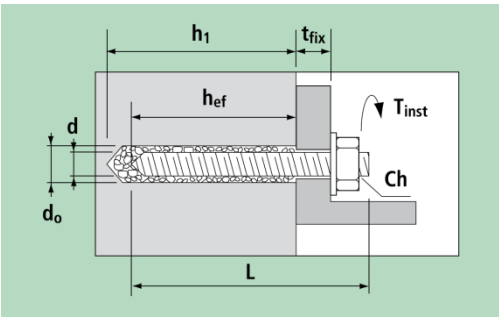
art.	**content**	**mixer**	**gun**
CC38	300 ml	1 M17	CP07, CP17
CC37	410 ml	1 M17	CP01, CP11, CP30, CP16

Intended use

Dry or wet concrete
Flooded holes on concrete
Dry or wet masonry
Cartridge temperature: between +5 and +40 °C
Installation temperature: between -5 and +39 °C
Work temperature: I between -40 and +40 °C (maximum short term temperature +40 °C; long term +24 °C)
II between -40 and +80 °C (maximum short term temperature +80 °C; long term +50 °C)
Shelf life: 18 months for 410 ml ml cartridges, 12 months for 300 ml cartridges (storage temperature between +5 and +25 °C)

Time and temperatures

temperature of base material	**working time**	**full curing dry base material**
-5 ÷ -1 °C	90 min	6 h
0 ÷ +4 °C	45 min	3 h
+5 ÷ +9 °C	25 min	2 h
+10 ÷ +14 °C	20 min	100 min
+15 ÷ +19 °C	15 min	80 min
+20 ÷ +29 °C	6 min	45 min
+30 ÷ +34 °C	4 min	25 min
+35 ÷ +39 °C	2 min	20 min



d = bar diameter
L = bar length
t_{fix} = fixable thickness
d_0 = hole diameter
h_1 = minimum hole depth
h_{nom} = setting depth
h_{ef} = effective anchorage depth
T_{inst} = tightening torque

use without sleeve: $h_{ef} = h_1 = h_{nom}$

- **Use on non-cracked and cracked concrete with threaded bars**

1 kN ≈ 100 kg
steel failure

Load values derive from parameters certified in European Technical Assessment ETA 22/0214. Characteristic resistance N_{Rk} refers uniquely to the resin resistance to failure due to pull-out and concrete cone. Design resistances N_{Rd} and V_{Rd} refer to all failure modes and include partial safety factors on strengths. Recommended loads N_{rec} and V_{rec} include the further 1.4 safety factor.

For the design of fixing with reduced spacing, near the edge or on concrete with increased resistance, reduced thickness or dense reinforcement refer to ETA 22/0214 or to Declaration of Performance DPGEB1027 and use the design method outlined in EN 1992-4. In the same way, for anchors installed in flooded holes and for different working temperatures (II, between -40 and +80 °C) refer to ETA or DoP. One can also calculate and verify the fixings made with Extreme Hybrid XTR by means of *G&B Calculation Program* available on the website www.gebfissaggi.com.

1 kN ≈ 100 kg

Characteristic resistances N_{Rk} and V_{Rk} derive from European Technical Assessment ETA 22/0211. Design resistances N_{Rd} and V_{Rd} include partial safety factor on strengths. Recommended values N_{rec} and V_{rec} include the further 1.4 safety factor.

For the design of fixing with reduced spacing or near the edge, or groups of two or more fixings and for the resistance of a bar under shear with lever arm refer to ETA 22/0211 or to Declaration of Performance DPGEB1027 and use the design method A outlined in Technical Report 054 (issued by EOTA).
